

Example Statement Two: Requesting Course and Laptop

I'm a 38-year-old Carrier of Hemophilia A. I have two children who both have Hemophilia A and as a result I have had to take a lot of time off work. I also have struggled to find a job that has good health insurance for my family which I need for my sons' BD treatment as for continued testing for myself if I develop symptoms. I currently work as an office manager however I would like to get my PMP certification by taking a course and then the test. Getting this certification would allow me to increase my earning potential and allow me to look for jobs with better benefits including paid sick time.

To complete this course, I would need a computer. Although we do have a laptop at home, it is several years old and will often malfunction. I believe if I tried to use this computer that the technical issues would cause issues during the course. The new computer could also be used to help me in my job search after I receive my certification. Any assistance towards my goal would be really appreciated.
